MPUMALANGA PROVINCIAL EVALUATION PLAN
FEBRUARY 2015
FOREWORD

We are pleased to introduce to you our first Provincial Evaluation Plan for the year 2014-2016 as part of the roll out of the National Evaluation Policy Evaluation Framework and the Mpumalanga Province Wide Monitoring and Evaluation Framework.

As the National Evaluation System evolves at provincial level, we have focused our attention on building departmental capacity in this relatively new area of expertise. We have drawn significantly on the guidelines published by the Department of Planning, Monitoring and Evaluation in our engagements with Province and we believe that the process of institutionalising evaluation as a critical practice for effective evidence and results based decision making is fully underway.

Our 2014-16 Provincial Evaluation Plan focuses on the diagnostic evaluations that we would like to complete during the current financial year. Each evaluation that has been selected for completion provides a building block for future, larger scale impact and implementation evaluations.

We are, in effect, laying the foundations for what we believe will be a substantial and substantive body of evidence to support the positive outcomes of our future policies and programmes.

We look forward to implementing high quality, meaningful evaluations that play a part in taking our Province from strength to strength.

FOREWORD

INTRODUCTION
Developing the Mpumalanga Provincial Evaluation Plan
Summary of Proposed Evaluations

BACKGROUND
The National Evaluation Policy Framework
The Rationale of the Provincial Evaluation Plan
Government Approach to Evaluation
Uses and Types of Evaluations
Audit of Provincial Evaluations

SUMMARY OF PROPOSED EVALUATIONS (2014 – 2016)
INTRODUCTION

The National Evaluation Policy Framework (NEPF) approved by Cabinet on the 23rd November 2011 provides for the establishment of an annual and three year rolling National Evaluation Plan as a focus for priority evaluations in government. Similarly, the framework also specifies that Provincial Evaluation Plans must be developed by Provinces and approved by their respective Provincial Executive Councils. The Provincial Evaluation Plan (PEP) is intended to identify the minimum evaluations to be carried out in the Province on an annual and a three yearly basis.

Developing the Mpumalanga Provincial Evaluation Plan

The roll out of the NEPF in the Province was piloted in the 2013/14 financial year as a means to assess the “evaluation-readiness” of the Province and to determine and build the capacity, processes and systems required for the implementation of a comprehensive 2014 – 2016 Provincial Evaluation Plan.

2013 saw the introduction of the concepts and principles of the NEPF to provincial sector departments under the guidance of the Office of the Premier (OtP). In addition, the OtP initiated a process of supporting provincial sector departments to develop evaluation concept notes with a view to selecting at least two provincial programme evaluations to support during the pilot phase.

Whilst some progress was made regarding the introduction of the NEPF and its associated guidelines, the Province fell short of completing the proposed evaluations. This was due, in large part to both budget and capacity constraints.

The current PEP is based on a modified approach to the institutionalisation of the NEPF.

The Mpumalanga Provincial Evaluation Technical Working Group (PETWG) provides technical and quality assurance support to those departments already implementing evaluations.

In addition, as Provincial departments continue growing their internal capacity and systems, the Office of the Premier, adopted a more proactive role in the development and utilisation of quality evaluations.

The evaluations proposed for 2014/16 combine planned departmental evaluations (2) and evaluations (9) selected and proposed by the PETWG based on desktop study and departmental consultations.

This annual Provincial Evaluation Plan for Mpumalanga was presented to the Provincial Cabinet for consideration and approval in September 2014.

The evaluations proposed in the Provincial Evaluation Plan have been selected for their direct bearing on, and potential contribution to, the achievement of provincial socio economic development priorities.

As we are starting a new term, it is also important to note that the evaluations proposed include a number of diagnostic/design evaluations that will test assumptions and provide recommendations in respect of a number of provincial MTSF priority projects.

Finally, the Provincial Evaluation Plan is developed and presented within the contest of the approved Mpumalanga Monitoring and Evaluation Framework and the Province Wide Monitoring and Evaluation System.
Summary of Proposed Evaluations

The evaluations proposed for the 2014/16 period include the following:

1. Evaluating the impact of the Expanded Public Works Programme (Phase II) in the Province

2. Diagnostic Evaluation: How will the establishment of the Mpumalanga Fresh Produce Market affect the livelihoods of small scale farmers in the Province?

3. Implementation Evaluation: Evaluating the effectiveness and efficiency of the Rapid Implementation Unit (RIU) as a coordinating mechanism to accelerate service delivery and reduce backlogs

5. Evaluating the implementation and impact of the Masibuyele Emasimini programme on agricultural production and income generation for smallholder farmers.

6. Diagnostic Evaluation: The International Convention Centre and its value proposition for local economic development and emerging tourism product owners. (Determine the baseline for future impact studies, and refine project design)

7. Evaluating the impact of provincial housing programmes

8. Diagnostic Evaluation: Evaluating whether (how) mining and industrial parks have an impact on scaling up SMME development through local procurement

9. Evaluating the implementation of Provincial SMME and cooperative development support strategies (Phase 1 of proposed long term impact study)

10. Diagnostic Evaluation: Ex ante evaluation to ascertain the provincial status quo in terms of cross border and cross boundary migration and the potential impact thereof on service delivery access and associated planning and budgeting.

11. Diagnostic Evaluation: Determine the viability of a Provincial Growth Challenge Fund as an instrument to attract private investment and address issues of youth unemployment.

BACKGROUND

The National Evaluation Policy Framework

The NEPF is the last of the three policy elements that form part of the Policy Framework for the Government Wide Monitoring and Evaluation System (GWMES), which was introduced in 2005. The NEPF and the National Evaluation Plan subsequently developed by DPME seeks to address the challenge that in government, “evaluation is being applied sporadically and not informing planning, policy-making and budgeting sufficiently”. As a result, government is lacking the evidence required to improve its efficiency, effectiveness, sustainability and impact.

The NEPF and the National Evaluation System are intended to do the following:

- Foreground the importance of evaluation in policy-making and management
• **Promote, facilitate and institutionalise** the use of evaluation in Government

• **Strengthen linkages** between evaluation, policy-making, planning and budgeting

• Develop a **common language and conceptual base** for evaluation in Government

• Clarify the **role of evaluations** in relation to other performance management instruments

• **Frame the evaluation function** in terms of its scope, institutionalization, standards, process requirements, skill requirements, governance, financing and oversight

• Improve the **quality of evaluations** undertaken in public institutions

• Increase the **utilisation of evaluation findings** to improve performance

The overall objective of the **National Evaluation System** is to:

• Improve policy or programme **performance** – providing feedback to managers

• Improve **accountability** for where public spending is going and the difference it is making

• Improve **decision-making** e.g. on what is working or not-working

• Increase **knowledge** about what works and what does not with regards to a public policy, plan, programme, or project.

**The Rationale of the Provincial Evaluation Plan**

Government performance, service delivery and the socio-economic development impact thereof can be strengthened by institutionalising an effective and efficient evaluation system and culture into the management functions of all departments.

Evaluations provide the evidence required for improvement plans that address delivery challenges. As the Province approaches the start of a new five year cycle, strategic and operational review and planning processes provide an ideal platform for the institutionalisation of evaluation as a core management practice. As a first step, departments should:

• allocate **sufficient budget** for annual and 3 year evaluations

• **identify suitable individuals** responsible for evaluation and build their capacity to design and implement relevant evaluations

**Government Approach to Evaluation**

The NEPF defines evaluation as “the systematic collection and analysis of evidence on public policies, programmes, projects, functions and organisations to assess issues such as relevance, performance (effectiveness and efficiency), value for money, impact and sustainability, and recommend ways forward.”

The value added by utilising evaluations has its foundation in the expectation that government will utilise evaluation findings and results as the basis for developing, publishing and implementing **improvement plans**.
The *links between planning and evaluation* are emphasised as a principle in the NEPF - “if plans do not clearly identify results or outcomes and impacts, how will these be achieved and how will these be measured...”

Plans should identify good quality measurable indicators that will be monitored during implementation – failure to collect baseline information on these indicators and to monitor and record changes to the indicators during implementation makes evaluation difficult.

In order to be evaluated, all plans should meet the requirements described above, including the long-term national vision and development plan, five year national and provincial plans aligned to the electoral cycle, delivery agreements for outcomes, sectorial plans, and programme and project plans.

If government’s strategic priorities are to be achieved then these priorities should also be traceable across the levels of government, through the different plans. In other words, there should be a “line of sight” across the plans.

**Uses and Types of Evaluations**

The NEPF proposes the following types of evaluation based on the National Treasury’s Results Based Pyramid model. The intention is to develop a common language and standard procedures within the GWM&ES.
The following table summarises the types of evaluation illustrated above and outlines their uses:

<table>
<thead>
<tr>
<th>Type of evaluation</th>
<th>Covers</th>
<th>Timing</th>
</tr>
</thead>
<tbody>
<tr>
<td>Diagnostic Evaluation</td>
<td>This is preparatory research (often called ex-ante evaluation) to ascertain the current situation prior to an intervention and to inform intervention design. It identifies what is already known about the issues at hand, the problems and opportunities to be addressed, causes and consequence, including those that the intervention is unlikely to deliver, and the likely effectiveness of different policy options. This enables the drawing up of the theory of change before the intervention is designed.</td>
<td>At key stages prior to design or planning</td>
</tr>
<tr>
<td>Design evaluation</td>
<td>Used to analyse theory of change. inner logic &amp; consistency of the programme, either before a programme starts, or during implementation. This is quick to do &amp; uses only secondary information &amp; should be used for all new programmes. It assesses the quality of the indicators and the assumptions.</td>
<td>After an intervention has been designed, in first year, and possibly later</td>
</tr>
<tr>
<td>Implementation evaluation</td>
<td>Aims to evaluate whether an intervention’s operational mechanisms support achievement of the objectives or not &amp; understand why. Looks at activities, outputs, &amp; outcomes, use of resources &amp; the causal links. It builds on existing monitoring systems, &amp; is applied during programme operation to improve the efficiency &amp; efficacy of operational processes. It assesses the quality of the indicators &amp; assumptions. Can be rapid, primarily using secondary data, or in-depth with extensive field work.</td>
<td>Once or several times during the intervention</td>
</tr>
<tr>
<td>Impact evaluation</td>
<td>Measure changes in outcomes (and the well-being of the target population) that are attributable to a specific intervention. Its purpose is to inform high-level officials on the extent to which an intervention should be continued or not, &amp; if there are any potential modifications needed. Implemented on a case-by-case basis.</td>
<td>Designed early on, baseline implemented early, impact checked at key stages e.g. 3/5 years</td>
</tr>
</tbody>
</table>
| Economic evaluation     | Economic evaluation considers whether the costs of a policy or programme have been outweighed by the benefits. Types of economic evaluation include:  

  **Cost-effectiveness analysis**, which values the costs of implementing and delivering the policy, and relates this amount to the total quantity of outcome generated, to produce a “cost per unit of outcome” estimate (e.g. cost per additional individual placed in employment); and  

  **Cost-benefit analysis** (CBA), which goes further in placing a monetary value on the changes in outcomes as well (e.g. the value of placing an additional individual in employment). | At any stage                                                             |

Audit of Provincial Evaluations

In 2013 the M&E Unit in the Office of the Premier conducted a survey with provincial sector departments in order to determine the number and type of evaluations conducted in the Province in the period 2009 – 2013.

The results of this preliminary audit indicated that:

- Of the 11 departments surveyed, only 6 listed evaluations that were completed during the 2009 – 2013 period
- The concept of “evaluation” is variously applied and understood (some departments have listed surveys or tools as evaluations, or have been unable to state the type of evaluation conducted)
- All responses indicate that the development and use of improvement plans based on the evaluations is absent
- There is little evidence that the impact or value addition of the evaluation process, beyond the completion of the associated report, is appreciated.

The NEPF, key DPME guidelines and templates (e.g. evaluation concept note) and the proposed pilot process were presented to and discussed with all provincial M&E officials.

The original list of approximately 26 evaluations proposed by sector departments and the Office of the Premier for the 2014/16 period was assessed by the PETWG in terms of:

- content
- scope
- applicability to provincial priorities
- available budget
- innovation
- stage of development (i.e. problem statement, concept note, ToRs etc.)
- strategic importance for planning and learning

Eleven proposed evaluations have been identified for implementation across a three year period, with three being prioritised for completion in the 2014/15 financial year:
